

Tennant cleaning machines equipped with fast-charging batteries

Clean while others are still charging

Ensure your floors always look immaculate, thanks to:

- Increased machine productivity
- Enhanced operator ease of use
- Spot cleaning and daytime cleaning

OPTIMA
BATTERIES
THE ULTIMATE POWER SOURCE™

TECHNOLOGY

- Compared to conventional batteries, this pure-lead AGM battery has an improved charge acceptance.
- Combined with our high-capacity off-board charger, the battery can be fully recharged in less than 90 minutes.
- The productivity of the cleaning machine can be boosted, since the battery is designed for frequent intermittent charging cycles without loss of neither capacity nor cycle life.
- Easy operator training and enhanced ease of use are achieved since the cleaning machine can be used throughout the shift and plugged into the charger at any given time (e.g. during the operator breaks) even without going to a full charge.
- This AGM lead battery is fully maintenance-free and recyclable to the highest industry standard.
- The battery is resistant to damage from misuse: since there is no incorrect way to charge, the battery will not fail.

ADVANTAGES

Tennant cleaning machines equipped with the new fast-charging batteries offer:

- Improved operating flexibility to better meet your specific cleaning requirements
- Increased machine productivity supporting daytime and opportunity cleaning
- Maintenance-free and easy operation, avoiding warranty discussions
- A sustainable solution

AVAILABILITY

The fast-charging batteries are available on the following Tennant equipment:

- T3 walk-behind scrubber-dryer
